## File lib/pids.sh

- [pids.stop-by-listen-tcp-ports\(\)](#)
- [pid.stop-if-listening-on-port\(\)](#)

## `pids.stop-by-listen-tcp-ports()`

Finds any PID listening on one of the provided ports and stop them.

### Example

```
pids.stop-by-listen-tcp-ports 4232 9578 "${PORT}"
```

## `pid.stop-if-listening-on-port()`

Finds any PID listening the one port and an optional protocol (tcp/udp)

### Example

```
pid.stop-if-listening-on-port 3000 tcp  
pid.stop-if-listening-on-port 8126 udp
```

---

## File `lib/array.sh`

- `array.has-element()`
- `array.includes()`
- `array.join()`
- `array.sort()`
- `array.sort-numeric()`
- `array.min()`
- `array.max()`
- `array.uniq()`
- `array.from.command()`

## `array.has-element()`

Returns "true" if the first argument is a member of the array passed as the second argument:

### Example

```
$ declare -a array=("a string" test2000 moo)
if [[ $(array.has-element "a string" "${array[@]}") == "true" ]]; then
    ...
fi
```

## array.includes()

Similar to array.has-elements, but does not print anything, just returns 0 if includes, 1 if not.

## array.join()

Joins a given array with a custom character

### Example

```
$ declare -a array=(one two three)
$ array.join "," "${array[@]}"
one,two,three
```

## array.sort()

Sorts the array alphanumerically and prints it to STDOUT

### Example

```
declare -a unsorted=(hello begin again again)
local sorted="$(array.sort "${unsorted[@]}")"
```

## array.sort-numeric()

Sorts the array numerically and prints it to STDOUT

### Example

```
declare -a unsorted=(1 2 34 45 6)
local sorted="$(array.sort-numeric "${unsorted[@]}")"
```

## array.min()

Returns a minimum integer from an array. Non-numeric elements are ignored and skipped over. Negative numbers are supported, but non-integers are not.

## Example

```
$ declare -a array=(10 20 30 -5 5)
$ array.min "," "${array[@]}"
-5
```

## array.max()

Returns a maximum integer from an array. Non-numeric elements are ignored and skipped over. Negative numbers are supported, but non-integers are not.

## Example

```
$ declare -a array=(10 20 30 -5 5)
$ array.min "," "${array[@]}"
30
```

## array.uniq()

Sorts and uniqs the array and prints it to STDOUT

## Example

```
declare -a unsorted=(hello hello hello goodbye)
local uniqed="$(array.sort-numeric "${unsorted[@]}")"
```

## array.from.command()

Creates an array variable, where each element is a line from a command output, which includes any spaces.

## Example

```
array.from.command music_files "find . -type f -name '*.mp3'"
echo "You have ${#music[@]} music files."
```

---

# File lib/asciidoc.sh

Provides helper functions for dealing with asciidoc format.

- `asciidoc.rouge-themes()`

## `asciidoc.rouge-themes()`

Installs gem "rouge" and prints all available themes

---

## File `lib/output-utils.sh`

- `is-dbg()`
- `dbg()`

## `is-dbg()`

Checks if we have debug mode enabled

## `dbg()`

Local debugging helper, activate it with `DEBUG=1`

---

## File `lib/brew.sh`

- `package.is-installed()`

## `package.is-installed()`

For each passed argument checks if it's installed.

---

## File `lib/output.sh`

- `section()`

## `section()`

Prints a "arrow-like" line using powerline characters

---

## Arguments

- @arg1 Width (optional) — only interpreted as width if the first argument is a number.
  - @args Text to print
- 

## File **lib/video.sh**

### is.sh

video conversions

---

## File **lib/path.sh**

Utilities for managing the \$PATH variable

- `path.strip-slash()`
- `path.dirs()`
- `path.dirs.size()`
- `path.dirs.uniq()`
- `path.uniq()`
- `path.append()`
- `path.prepend()`
- `path.mutate.uniq()`
- `path.mutate.append()`
- `path.mutate.prepend()`
- `PATH_add()`

### **path.strip-slash()**

Removes a trailing slash from an argument path

### **path.dirs()**

Prints a new-line separated list of paths in PATH

---

## Arguments

- @arg1 A path to split, defaults to \$PATH

## path.dirs.size()

Prints the total number of paths in the path argument, which defaults to \$PATH

## path.dirs.uniq()

Prints all folders in \$PATH, one per line, removing any duplicates, Does not mutate the \$PATH

## path.uniq()

Removes duplicates from the \$PATH (or argument) and prints the results in the PATH format (column-joined). DOES NOT mutate the actual \$PATH

## path.append()

Appends a new directory to the \$PATH and prints the result to STDOUT, Does NOT mutate the actual \$PATH

## path.prepend()

Prepends a new directory to the \$PATH and prints to STDOUT, If one of the arguments already in the PATH its moved to the front. DOES NOT mutate the actual \$PATH

## path.mutate.uniq()

Removes any duplicates from \$PATH and exports it.

## path.mutate.append()

Appends valid directories to those in the PATH, and exports the new value of the PATH

## path.mutate.prepend()

Prepends valid directories to those in the PATH, and exports the new value of the PATH

## PATH\_add()

This function exists within direnv, but since we are sourcing in .envrc we need to have this defined to avoid errors.

# File `lib/osx.sh`

OSX Specific Helpers and Utilities

- `osx.app.is-installed()`

## `osx.app.is-installed()`

Checks if a given parameter matches any of the installed applications under `/Applications` and `~/Applications`

By the default prints the matched application. Pass `-q` as a second argument to disable output.

### Example

```
> osx.app.is-installed safari
Safari.app
> osx.app.is-installed safari -q && echo installed
installed
> osx.app.is-installed microsoft -c
6
```

### Arguments

- `$1(a)`: string value to match (case insensitively) for an app name
- `$2..` additional arguments to the last invocation of `grep`

### Exit codes

- `0`: if match was found
- `1`: if not

---

# File `lib/db.sh`

- `db.config.parse()`
- `db.psql.connect()`
- `db.psql.connect.just-data()`
- `db.psql.connect.table-settings-set()`
- `db.psql.db-settings()`
- `db.psql.connect.db-settings-pretty()`

- `db.psql.connect.db-settings-toml()`
- `db.actions.pga()`

## `db.config.parse()`

Returns a space-separated values of db host, db name, username and password

### Example

```
db.config.set-file ~/.db/database.yml
db.config.parse development
#=> hostname dbname dbuser dbpass
declare -a params=$(db.config.parse development)
echo ${params[0]} # host
```

## `db.psql.connect()`

Connect to one of the databases named in the YAML file, and optionally pass additional arguments to psql. Informational messages are sent to STDERR.

### Example

```
db.psql.connect production
db.psql.connect production -c 'show all'
```

## `db.psql.connect.just-data()`

Similar to the `db.psql.connect`, but outputs just the raw data with no headers.

### Example

```
db.psql.connect.just-data production -c 'select datname from pg_database;'
```

## `db.psql.connect.table-settings-set()`

Set per-table settings, such as autovacuum, eg:

### Example

```
db.psql.connect.table-settings-set prod users autovacuum_analyze_threshold 1000000
db.psql.connect.table-settings-set prod users autovacuum_analyze_scale_factor 0
```

## db.psql.db-settings()

Print out PostgreSQL settings for a connection specified by args

### Example

```
db.psql.db-settings -h localhost -U postgres appdb
```

## db.psql.connect.db-settings-pretty()

Print out PostgreSQL settings for a named connection

### Example

```
db.psql.connect.db-settings-pretty primary
```

### Arguments

- @arg1 dbname database entry name in ~/.db/database.yml

## db.psql.connect.db-settings-toml()

Print out PostgreSQL settings for a named connection using TOML/ini format.

### Example

```
db.psql.connect.db-settings-toml primary > primary.ini
```

### Arguments

- @arg1 dbname database entry name in ~/.db/database.yml

## db.actions.pga()

Installs (if needed) pg\_activity and starts it up against the connection

## File `lib/shdoc.sh`

### `lib/shdoc.sh`

Helpers to install gawk and shdoc properly.0

see `${BASHMATIC_HOME}/lib/shdoc.md` for an example of how to use SHDOC. and also [project's github page](#).

- `gawk.install()`

### `gawk.install()`

Installs gawk into `/usr/local/bin/gawk`

---

## File `lib/git.sh`

- `git.cfgu()`
- `git.open()`

### `git.cfgu()`

Sets or gets user values from global gitconfig.

#### Example

```
git.cfgu email
git.cfgu email kigster@gmail.com
git.cfgu
```

### `git.open()`

Reads the remote of a repo by name provided as an argument (or defaults to "origin") and opens it in the browser.

#### Example

```
git clone git@github.com:kigster/bashmatic.git
cd bashmatic
source init.sh
git.open
git.open origin # same thing
```

## Arguments

- `$1` (optional): name of the remote to open, defaults to "origin"

## File `lib/package.sh`

- `package.ensure.is-installed()`
- `package.ensure.command-available()`

### `package.ensure.is-installed()`

fr

### `package.ensure.command-available()`

## Example

```
In this example we skip installation if 'gem' exists and in the PATH.
Otherwise we install the package and retry, and return if not found
```

## File `lib/time.sh`

- `time.with-duration.start()`

### `time.with-duration.start()`

Starts a time for a given name space

## Example

```
time.with-duration.start moofie
# ... time passes
time.with-duration.end    moofie 'Moofie is now this old: '
# ... time passes
time.with-duration.end    moofie 'Moofie is now very old: '
time.with-duration.clear moofie
```

## File `lib/shasum.sh`

### SHA Functions

SHASUM related functions, that compute SHA for a single file, collection of files, or entire directories.

- `shasum.set-command()`
- `shasum.set-algo()`
- `shasum.sha()`
- `shasum.sha-only()`
- `shasum.sha-only-stdin()`
- `shasum.to-hash()`
- `shasum.all-files()`
- `shasum.all-files-in-dir()`

### `shasum.set-command()`

Override the default SHA command and algorithm Default is `shasum -a 256`

### `shasum.set-algo()`

Override the default SHA algorithm

### Example

```
$ shasum.set-algo 256
```

## shasum.sha()

Compute SHA for all given files, ignore STDERR NOTE: first few arguments will be passed to the shasum command, or whatever you set via shasum.set-command.

## shasum.sha-only()

Print SHA ONLY removing the file components

## shasum.sha-only-stdin()

Print SHA ONLY removing the file components

## shasum.to-hash()

This function populates a pre-declare associative array with filenames mapped to their SHAs, but only in the current directory Call **dbg-on** to enable additional debugging info.

### Example

```
$ declare -A file_shas
$ shasum.to-hash file_shas $(find . -type f -maxdepth 2)
$ echo "Total of ${#file_shas[@]} files in the hash"
```

## shasum.all-files()

For a given array of files, sort them, take a SHA of each file, and return a single SHA finger-printing this set of files.  
# NOTE: the files are sorted prior to hashing, so the return SHA should ONLY change when files are either changed, or added/removed. Only computes SHA of the files provided, does not recurse into folders

### Example

```
$ shasum.all-files *.cpp
```

## shasum.all-files-in-dir()

For a given directory and an optional file pattern, use **find** to grab every single file (that matches optional pattern) and return a single SHA

### Example

```
$ shasum.all-files-in-dir . '*.pdf'
cc35aad389e61942c75e111f1eddb634d74b4b1
```

---

## File **lib/pg.sh**

- `pg.is-running()`
- `pg.running.server-binaries()`
- `pg.running.data-dirs()`
- `pg.server-in-path.version()`

### **pg.is-running()**

Returns true if PostgreSQL is running locally

### **pg.running.server-binaries()**

if one or more PostgreSQL instances is running locally, prints each server's binary postgres file path

### **pg.running.data-dirs()**

For each running server prints the data directory

### **pg.server-in-path.version()**

Grab the version from `postgres` binary in the PATH and remove fractional sub-version

---

## File **lib/dir.sh**

- `dir.short-home()`

### **dir.short-home()**

Replaces the first part of the directory that matches `${HOME}` with `'~/`

## File `lib/net.sh`

- `net.is-host-port-protocol-open()`

## `net.is-host-port-protocol-open()`

Uses pingless connection to check if a remote port is open Requires sudo for UDP

### Arguments

- `@arg1` host
  - `@arg2` port
  - `@arg3` [optional] protocol (defaults to "tcp", supports also "udp")
- 

## File `lib/is.sh`

Various validations and asserts that can be chained and be explicit in a DSL-like way.

- `<<isvalidationerror,is.validation.error(>>`
- `is-validations()`
- `<<isvalidationignore-error,is.validation.ignore-error(>>`
- `<<isvalidationreport-error,is.validation.report-error(>>`
- `whenever()`

## `__is.validation.error()`

Invoke a validation on the value, and process the invalid case using a customizable error handler.

### Arguments

- `@arg1` func Validation function name to invoke
- `@arg2` var Value under the test
- `@arg4` error\_func Error function to call when validation fails

### Exit codes

- `0`: if validation passes

## is-validations()

Returns the list of validation functions available

## \_\_is.validation.ignore-error()

Private function that ignores errors

## \_\_is.validation.report-error()

Private function that ignores errors

## whenever()

a convenient DSL for validating things

### Example

```
whenever /var/log/postgresql.log is.an-empty-file && {  
    touch /var/log/postgresql.log  
}
```

---

## File lib/util.sh

Miscellaneous utilities.

- [util.rot13-stdin\(\)](#)

## util.rot13-stdin()

Convert STDIN using rot13

### Example

```
echo "test" | util.rot13-stdin
```

---

## File lib/pdf.sh

# Bashmatic Utilities for PDF file handling

Install and uses GhostScript to manipulate PDFs.

- [pdf.combine\(\)](#)

## pdf.combine()

Combine multiple PDFs into a single one using ghostscript.

### Example

```
pdf.combine ~/merged.pdf 'my-book-chapter*'
```

### Arguments

- **\$1**(pathname): to the merged file
- ... (the): rest of the PDF files to combine

---

## File **bin/install-direnv**

Add direnv hook to shell RC files

- [direnv.register\(\)](#)

## direnv.register()

Add direnv hook to shell RC files

---

## File **bin/regen-usage-docs**

Regenerates USAGE.adoc && USAGE.pdf

---

## File **bin/pdf-reduce**

- [pdf.do.shrink\(\)](#)

**pdf.do.shrink()**

shrinks PDF
